

SD8 — Wafer Head Screw

Material

Carbon Steel

Finish

Clear Zinc

Size: See the table below

Features & Benefits

- Wafer Head
- Deep #2 Phillips drive reduces cam-out and makes driving easier
- Type-17 Point for fast starts

Applications

- General Timber-To-Timber fastening
- Can be used with connectors where specified

Wafer Head for a low profile finish

Sharp Point for fast starts

Specifications - Hand-drive

Model No.	Size	Thread	Point	Material & Finish	Box Qty	Drive Size
SD8X1.25-R	#8 x 32mm	Coarse Threads	Sharp Point	Clear Zinc	100	#2 Phillips

These coated fasteners possess a level of corrosion resistance that makes them suitable for use in some exterior and corrosive environments and with some preservative-treated timber. For applications in higher-exposure applications, consider Type-300 series stainless-steel fasteners for superior corrosion resistance. Bit(s) included with every box of screws. Pre-drilling and countersink may be necessary at ends, butt joints, and on applications where denser material is used. Follow board manufacturers recommendations where applicable.
